Informatics in Control, Automation and Robotics 12th International Conference, ICINCO 2015 Colmar, France, July 21-23, 2015

Revised Selected Papers Feb 08 2021 The present book includes a set of selected extended papers from the 12th International Conference on Informatics in Control, Automation and Robotics (ICINCO 2015), held in Colmar, France, from 21 to 23 July 2015.

The conference brought together researchers, engineers and practitioners interested in the application of informatics to Control, Automation and Robotics. Four simultaneous tracks will be held, covering Intelligent Control Systems, Optimization, Robotics, Automation, Signal Processing, Sensors, Systems Modelling and Control, and Industrial Engineering, Production and Management.

Informatics applications are pervasive in many areas of Control, Automation and Robotics. ICINCO 2015 received 214 submissions, from 42 countries, in all continents. After a double blind paper review performed by the Program Committee, 14% were accepted as full papers and thus selected for oral presentation. Additional papers were accepted as short papers and posters. A further selection was made after the Conference, based also on the assessment of presentation quality and

audience interest, so that this book includes the extended and revised versions of the very best papers of ICINCO 2015.

Commitment to high quality standards is a major concern of ICINCO that will be maintained in the next editions, considering not only the stringent paper acceptance ratios but also the quality of the program committee, keynote lectures, participation level and logistics.

Tunnels and Underground Cities: Engineering and Innovation Meet Archaeology, Architecture and Art Oct 16 2021 Tunnels and Underground Cities: Engineering and Innovation meet Archaeology, Architecture and Art. Volume 5: Innovation in underground engineering, materials and equipment - Part 1 contains the contributions presented in the eponymous Technical Session during the World Tunnel Congress 2019 (Naples, Italy, 3-9 May 2019). The use of underground space is continuing to grow, due to global urbanization, public demand for efficient transportation, and energy saving, production and distribution. The growing need for space at ground level, along with its continuous value increase and the challenges of energy saving and achieving sustainable development objectives, demand greater and better use of the underground space to ensure that it supports sustainable, resilient and more liveable cities. The contributions cover a wide range of topics, from artificial intelligence techniques for geomechanical forecasting, via fiber reinforced concrete segmental lining, to advanced 4-channel scan systems for tunnel inspection. The book is a valuable reference text for tunnelling specialists, owners, engineers, archaeologists, architects, artists and others involved in underground planning, design and building around the world, and for academics who are interested in underground constructions and geotechnics.

Mine Planning and Equipment Selection 2004 Aug 22 2019  
Spearheading the promotion of international technology transfer in the fields of mine planning, mining systems design, equipment selection and operation techniques, the International Symposium on Mine Planning and Equipment Selection is recognised by the mining society as a key annual event in highlighting developments within the field. Here in this volume, proceedings from the thirteenth annual symposium concentrate on the following major topics: \* open pit and underground mine planning, modelling and design \* geomechanics \* mining and processing methods \* design, monitoring and maintenance of mine equipment \* simulation, optimization and control of technological processes \* management, mine economics and financial analysis \* health, safety and environmental protection. Including 147 papers from leading experts and authorities, Mine Planning and Equipment Selection undoubtedly provides valuable information and insight for a range of engineers, scientists, researchers and consultants involved in the planning, design and operation of underground and surface mines.

Proceedings of the 5th International Conference on Industrial Engineering (ICIE 2019) Dec 26 2019 This book highlights recent findings in industrial, manufacturing and mechanical engineering, and provides an overview of the state of the art in these fields, mainly in Russia and Eastern Europe. A broad range of topics and issues in modern engineering are discussed, including the dynamics of machines and working processes, friction, wear and lubrication in machines, surface transport and technological machines, manufacturing engineering of industrial facilities, materials engineering, metallurgy, control systems and their industrial applications, industrial mechatronics, automation and robotics. The book gathers selected papers presented at the 5th International Conference on Industrial Engineering (ICIE), held in

Sochi, Russia in March 2019. The authors are experts in various fields of engineering, and all papers have been carefully reviewed. Given its scope, the book will be of interest to a wide readership, including mechanical and production engineers, lecturers in engineering disciplines, and engineering graduates.

Active Tip-Over Prevention for Mobile Excavators Jun 12 2021

Hydraulic Excavators are subjected to tip-over situations with potential hazardous outcome. The given work analyses the state of the art of tip-over protection methods, including the current mandatory overload protection system. Using methods derived from the area of robotics, an algorithm for use as an assistance system was developed to predict and actively prevent dangerous tip-over situations. The developed method was evaluated in multi-body simulation models and in physical field tests.

Business Automation and Its Effect on the Labor Force Sep 03 2020 Business Automation and Its Effect on the Labor Force informs business managers on new technologies that can make their industries more efficient. This book provides a primer on quantum computing, artificial intelligence, robotics, and sensors. As a business management book, managers can start planning for the future. The author predicts when the advanced systems would be ready to use. Getting a clearer picture of what is on the horizon, business managers can determine how many workers and machines will be needed. Managers will learn how to calculate the

optimal mix of workers and machines. Key Book Highlights Covering labor and technology in agriculture, manufacturing, construction, transportation, hospitality, health care, office administration, and education. A review of the evolution of systems, machines, and devices from the past to the present, and where the latest advancement is headed. A visual timeline showing when new systems and machines would be available for eight industries in the next 25 years. Succinct descriptions of eliminated jobs, retained jobs, and new roles for workers. A simplified method to calculate the costs of operations, allowing business managers to compare human productivity against machine productivity. Labor market information in context of technological innovation for state workforce agencies and local workforce development boards. Lists of occupations with Standard Occupational Classification (SOC) codes for labor economists, workforce development specialists, and job seekers.

Advances in Mechanical Design Oct 04 2020 Focusing on innovation, these proceedings present recent advances in the field of mechanical design in China and offer researchers, scholars and scientists an international platform to present their research findings and exchange their ideas. In the context of the “Made in China 2025” development strategy, one central aspect of the ICMD2017 was Innovative Design Pushes “Made in China 2025.” The book highlights research hotspots in mechanical design, such as design methodology, green design, robotics and mechanics, and reliability design, while also combining industrial design and mechanical design.

Construction Equipment Guide Mar 21 2022 With the construction boom reaching over \$300 billion by the early 1990s in the United States alone, this comprehensive and accessible guide is more

important than ever for the budget-minded contractor. Presenting quick engineering know-how for the performance and satisfactory completion of construction using commonly recognized equipment, it deals with the physical concepts of the work, the surrounding conditions and equipment requirements, with an emphasis on controls governing the equipment's performance.

Automatic Structural Synthesis and Creative Design of Mechanisms Apr 10 2021 This book provides a comprehensive overview of the current research status and open problems in the field of structural synthesis, based on which a systematic methodology for the structural analysis of planar kinematic chains, structural synthesis of planar kinematic chains, and creative design of mechanisms is presented. The method presented in this book not only promotes the development of theoretical research in the field of mechanical science, and the development of industrial software for the creative design of mechanisms, but also generates novel high-performance mechanisms suitable for industrial application, which can improve the work efficiency and economic benefits. This book offers theoretical guidance for students and researchers engaged in the field of mechanical engineering, especially the creative design of mechanism.

LEGO Amazing Vehicles Dec 18 2021 Learn about amazing vehicles with fantastic LEGO® builds. Plus bricks to build four exclusive LEGO mini models! Discover the world's most incredible things that go with specially commissioned LEGO® models. Buckle up and explore the most incredible moving machines on the planet. Get inspired by more than 100 LEGO model ideas, from diggers to cars to aeroplanes to trains. Follow simple building tips to create your own LEGO vehicles. From trains and tractors to aircraft, spacecraft, and automobiles, this ebook showcases every kind of machine that moves—from past to present, and far into the future. Children will learn as they build and play. Best of all, it comes with 61 bricks to build four exclusive LEGO mini-vehicles! ©2019 The LEGO Group.

Construction Equipment Management for Engineers, Estimators, and Owners Sep 15 2021 Based on the authors' combined experience of seventy years working on projects around the globe, Construction Equipment Management for Engineers, Estimators, and Owners contains hands-on, how-to information that you can put to immediate use. Taking an approach that combines analytical and practical results, this is a valuable reference for a wide r

Topical Issues of Rational Use of Natural Resources Dec 06 2020  
Topical Issues of Rational Use of Natural Resources contains the contributions presented at International Forum-Contest of Young Researchers 2018 (St. Petersburg Mining University, Russia, 18-20 April 2018). The Forum-Contest is an excellent opportunity for young researchers to present their work to the scientific community involved in the extraction and processing of natural resources. The topics of the book include: • Prospecting and exploration of mineral deposits • Development of solid minerals deposits and safety of mining operations • Development of oil and gas fields and transportation of crude hydrocarbons • Modern technologies of construction work applied in the mineral complex • Metallurgy. Physical and chemical technologies of hydrocarbons treatment • Equipment, transport service and energy efficiency of mining enterprises • Economic tools of innovative development • Environmental protection • Geo information systems and nanotechnologies Topical Issues of Rational Use of Natural Resources collects the best reports presented at the Forum-Contest, and will be of interest to academics and professionals involved in the extraction and processing of natural resources.
