The Palgrave Handbook of Institutional Ethnography Oct 17 2021 A comprehensive guide to the alternative sociology originating in the work of Dorothy E. Smith, this Handbook not only explores the basic, founding principles of institutional ethnography (IE), but also captures current developments, approaches, and debates. Now widely known as a "sociology for people," IE offers the tools to uncover the social relations shaping the everyday world in which we live and is utilized by scholars and social activists in sociology and beyond, including such fields as education, nursing, social work, linguistics, health and medical care, environmental studies, and other social-service related fields. Covering the theoretical and methodological underpinnings of IE, recent developments, and current areas of research and application that have yet to appear in the literature, *The Palgrave Handbook of Institutional Ethnography* is suitable for both experienced practitioners of institutional ethnography and those who are exploring this approach for the first time.

Bloodwork Sep 27 2022 A Jesuit poet once wrote, "If my God is a God of Light ? it is a Dark Light." *Blood Work* consists of unconventional and highly personal poems in the spirit of William Blake and Charles Williams. Their unitive theme is the Metaphysical Poets' unique conceptualization of the human soul as having blood. Subjects range from transcendent beauty and apotheosis to intense personal agony and frustrated creativity. Though varied, these heavily allusive and strangely imagist pieces attempt to convey ? as Donne did masterfully in his Holy Sonnet XIV ? that Love can suffer the worst violence, and be, itself, the most violent force of transformation. *Blood Work* is the humble first offering of Nathan Redman, a young person whose primary pursuit in life is to be a man of Christian integrity. His secondary pursuit is to write poetry that might in some way "open a door of speech to speak the Mystery of Christ" (Col. 4:3).

Sixty Years of Jump Racing Sep 03 2020 Robin Oakley brings alive the colourful world of those who ride and train jumping horses. With elegant production and gripping images *The History of Jump Racing* chronicles the social and economic changes which have brought the sport's ups and downs-like the development of sponsorships and syndicate ownership, the near loss of the Grand National, the growing domination of the Cheltenham Festival and the growth of all-weather racing to meet the bookies' demands for betting shop fodder. Pace and colour is provided by stories of the horses who have been taken to the heart of racing crowds, like the Irish-trained hurdler Istabraq and Best Mate, the three-times winner of the Cheltenham Gold Cup for England. Famous rivalries and memorable races are re-lived and key victories revisited in portraits of and interviews with the owners, jockeys and trainers who have dominated the sport. The emphasis will be largely on the past fifty years-from Arkle to Tony McCoy-but a significant introduction by Edward Gillespie encapsulates the past history of what was previously known as 'National Hunt Racing' and sets the stories in context. .

Blood Work Nov 29 2022 What is blood? How can we account for its enormous range of meanings and its extraordinary symbolic power? In *Blood Work* Janet Carsten traces the multiple meanings of blood as it moves from donors to labs, hospitals, and patients in Penang, Malaysia. She tells the stories of blood donors, their varied motivations, and the paperwork, payment, and other bureaucratic processes involved in blood donation, tracking the interpersonal relations between lab staff and revealing how their work with blood reflects the social, cultural, and political dynamics of modern Malaysia. Carsten follows hospital workers into factories and community halls on blood drives and brings readers into the operating theater as a machine circulates a bypass patient's blood. Throughout, she foregrounds blood's symbolic power, uncovering the processes that make the hospital, the blood

bank, the lab, and science itself work. In this way, blood becomes a privileged lens for understanding the entanglements of modern life.

Micro/Nano Devices for Blood Analysis Nov 17 2021 The development of micro- and nanodevices for blood analysis is an interdisciplinary subject that demands the integration of several research fields, such as biotechnology, medicine, chemistry, informatics, optics, electronics, mechanics, and micro/nanotechnologies. Over the last few decades, there has been a notably fast development in the miniaturization of mechanical microdevices, later known as microelectromechanical systems (MEMS), which combine electrical and mechanical components at a microscale level. The integration of microflow and optical components in MEMS microdevices, as well as the development of micropumps and microvalves, have promoted the interest of several research fields dealing with fluid flow and transport phenomena happening in microscale devices. Microfluidic systems have many advantages over their macroscale counterparts, offering the ability to work with small sample volumes, providing good manipulation and control of samples, decreasing reaction times, and allowing parallel operations in one single step. As a consequence, microdevices offer great potential for the development of portable and point-of-care diagnostic devices, particularly for blood analysis. Moreover, the recent progress in nanotechnology has contributed to its increasing popularity, and has expanded the areas of application of microfluidic devices, including in the manipulation and analysis of flows on the scale of DNA, proteins, and nanoparticles (nanoflows). In this Special Issue, we invited contributions (original research papers, review articles, and brief communications) that focus on the latest advances and challenges in micro- and nanodevices for diagnostics and blood analysis, micro- and nanofluidics, technologies for flow visualization, MEMS, biochips, and lab-on-a-chip devices and their application to research and industry. We hope to provide an opportunity to the engineering and biomedical community to exchange knowledge and information and to bring together researchers who are interested in the general field of MEMS and micro/nanofluidics and, especially, in its applications to biomedical areas.
